

EPC Read

Quickly confirm the information programmed into a tag by using the EPC Read feature.

Requirements:

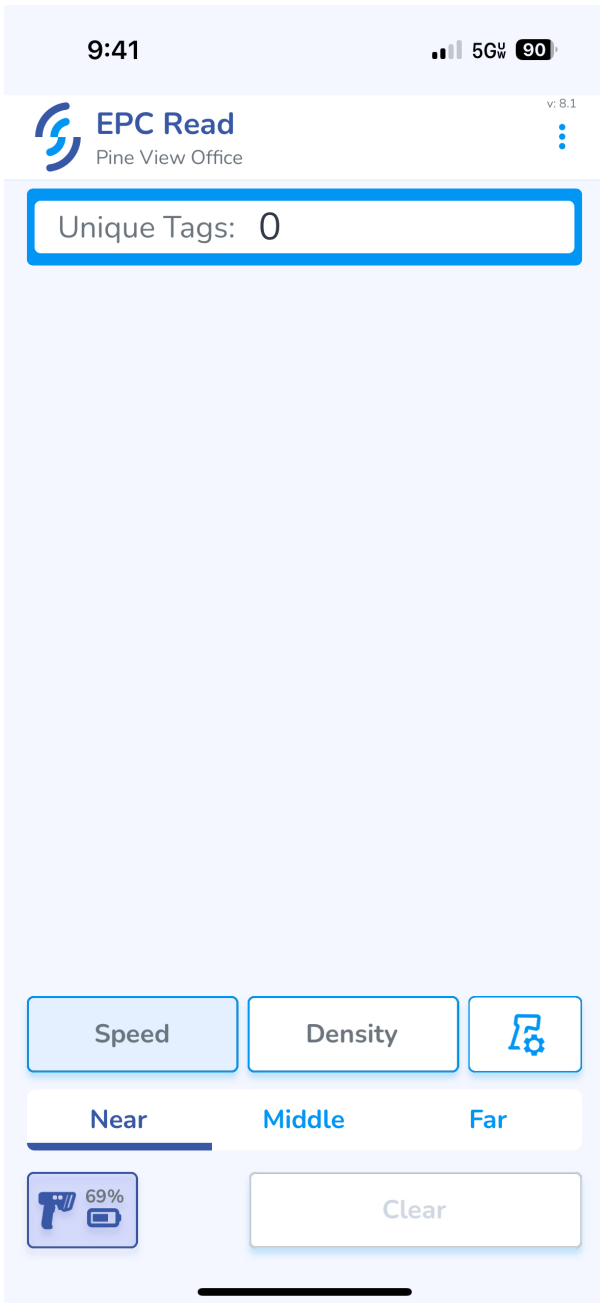

- A mobile device with the Simple RFID app installed
- A handheld TSL reader paired to the mobile device
 - [Instructions for pairing your reader](#)

Step 1: Select the EPC Read option on the mobile app

Step 2: Adjust the reader power

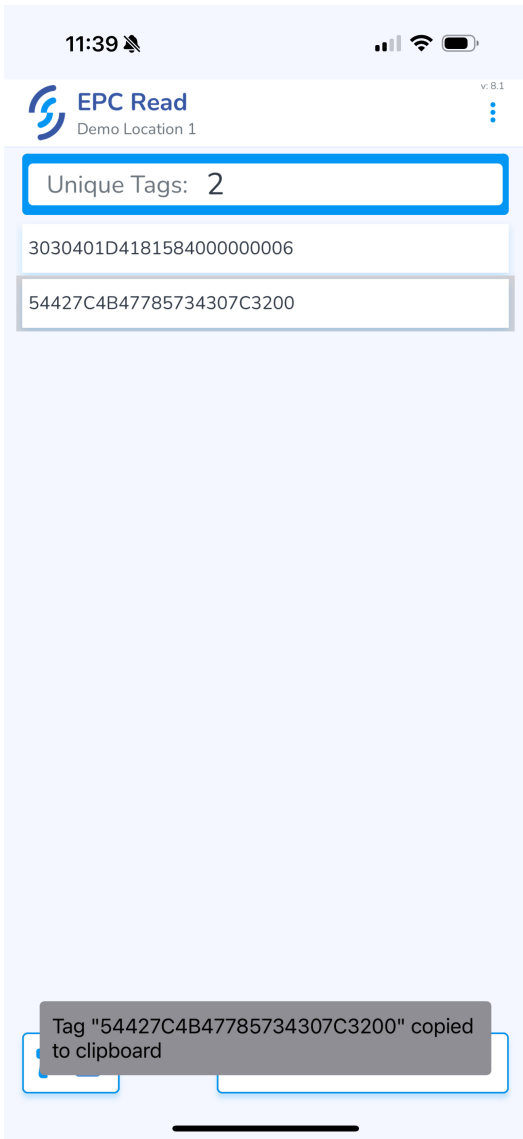

If you're trying to capture a specific tag, make sure to set the power to **Near**, otherwise you may pick up other tags in the area, making it difficult to identify the correct tag.

Step 3: Scan the tag(s)

Pull the trigger to scan

Tap on the EPC you wish to copy to the device's clipboard

This will allow you to view & share EPC numbers for troubleshooting.
