

Shopify Sales Orders: Copy, Verify Accuracy, Update Shopify

In an effort to deprecate the Shopify plugin, we have moved the Sales Order import flow to the Portal. Here's how to submit Shopify Sales Orders to be verified by the mobile app.

The current process is designed as a cue which is sent to the mobile app for verification. The submission process effectively copies the order from Shopify to Simple RFID. At this point the operator is able to scan the order to verify the contents, and update the order status in Shopify to Fulfilled.

To submit the order:

1. Choose the location you wish to fulfill the orders from
2. Click the checkbox(es) of the orders you wish to verify. Click the top checkbox to select all records.
3. Click QC
4. Click Apply

Search by order #		Shopify - Unfulfilled	All stores	101	QC	Apply	
Order #	Created	Store	Items	Fulfillment	Payment	Tags	☐
#1168	10/07/26 7:48 AM	simplerfid-qa	1	Unfulfilled	Paid		☒
#1167	10/07/26 7:41 AM	simplerfid-qa	1	Unfulfilled	Paid		☒
#1162	10/06/26 5:35 AM	simplerfid-qa	1	Unfulfilled	Paid		☐

Picksheet Open

Close

Result: The Sales Order will be imported and ready for QC verification from the mobile app / handheld reader.

[Mobile Verification Overview](#)

Next, follow the steps in the sales order verification workflow.

Currently, all items must be scanned complete for the order status is updated in Shopify to Fulfilled.

From inside the sales order in Shopify, a log is made which indicates the fulfillment and action:

Today

 Simple RFID QA marked 2 items as fulfilled from 101. ▾
