

Mobile App: Audit: Scan Items in Audit

Scanning Items from the Mobile App

From the Mobile App users can scan items included in the Audit to identify any discrepancies between your partner system's inventory (such as Shopify or Apparel Magic) and the inventory detected through RFID scanning.

To begin scanning:

1. Open the **Audit** page in the Simple RFID Mobile App.
2. Select the Audit you want to perform.
3. Tap **Start Audit** to begin scanning RFID tags.

Initially items will load with 0 quantity and display as "Under Expected"

Under Expected, Over Expected, and Matched

As products are scanned, each product is categorized based on the comparison between the **Expected** and **Scanned** quantities:

Under Expected – Fewer items were scanned than were expected.

Over Expected – More items were scanned than were expected.

Matched - The scanned quantity matches the expected inventory quantity.

When you are satisfied with the scan results, click Next to proceed to the Upload prompt

Audit Summary Screen

From the Audit Summary screen the user will see the totals from their Audit.

Here they can choose to perform a **Control Scan**

Audit Summary

Audit started: 07/02/2026 12:04 PM

Time elapsed: 4 minutes

Products: 3 / 3

Items: 17 / 11

Products in 

 Under expected  Over expected  Matched

1 **1** **1**

Use 'Control scan' for more accurate and dense scanning

Control scan

☐ I don't need additional scan

Upload

Or they may choose to bypass this scan and upload immediately by clicking the "I don't need additional scan" checkbox, then click "Upload"

Once uploaded a toast pop-up message will appear indicating that the scans were uploaded successfully.

You may repeat the scan process as many times as necessary while the Audit remains **Open**. Additional scans are combined with previous scan results, allowing you to continue improving the Audit's accuracy.

Important: Clicking **Complete Audit** closes the Audit and prevents any additional RFID scans from being uploaded. Before completing the Audit, ensure all scans have been performed and uploaded successfully.

After the Audit has been **Completed**, navigate to the **Resolve & Sync** page on the Web Portal to review any inventory discrepancies, resolve outstanding issues, and sync the updated inventory quantities back to partner system.
