

Location Framework

The Location Framework provides the ability to create properties that can be assigned to tags via a drop-down menu. Although this is called "Location" Framework, these properties can include anything you wish to associate with your items such as:

- Sublocations - Create rows, bins, isles, etc.
- Flags - Set items to status such as alterations, embroidery, layaway, etc.
- Process - Assembly, Packaging, QA, etc.

List tab

The Location Frameworks list tab displays all created frameworks.

+

Create a Framework

From the Edit tab:

- Type & Location - Select the type & location you wish to apply the framework to
- Add - From the add section, enter the values separated by a comma
- Click the "+" button to add them

Edit a Framework

From the List tab:

- Select the desired framework

From the Edit tab:

- Click the pencil icon to edit an existing value
- Click the Trash Can icon to delete the value
- Or use the Add row to add a new property

These frameworks appear on the web portal Inventory tab [Tag level](#) views, and can be edited there.

These frameworks can be set from the mobile device [Write Tags](#) page when using Single Tag Encoding
